WPI; 2002-130570/17.

New immunostimulatory compositions comprising RNA/DNA hybrid oligonucleotides, useful for enhancing an immune response or inducing cytokines, particularly for treating diseases, e.g. cancer, allergy or HIV infection.

Example 11; Page 61; 68pp; English.

The present invention relates to an immunostimulatory composition, which comprises at least one oligonucleotide comprising both an RNA region and a DNA region. The composition is useful for enhancing an immune response or inducing cytokines; It can be used as a vaccine adjuvant and in treating diseases, including pathogenic infection, (non-)malignant treating diseases, including pathogenic infection, (non-)malignant colon, or carcinomas and sarcomas), autoimmune diseases or allergies (e.g. allergic rhinitis, hay fever or food allergies), Lyme disease, hepatitis, HIV or malaria. The composition is also useful for treating, preventing or ameliorating the symptoms resulting from exposure to a biowarfare agent, e.g. Ebola, Anthrax or Listeria. The present sequence is an immunostimulatory oligonucleotide described in the exemplification of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 11388, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster;

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster;

FILE REFERENCE: File Reference: 7326-094

CURRENT APLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

                                          comprises at least one oligonout entering both an RNA region and a DNA region. The composition is useful for enhancing both an RNA region and a DNA region. The composition is useful for enhancing an immune response or inducing cytokines. It can be used as a vaccine adjuvant and in treating diseases, including pathogenic infection, (non-)malignant tumours (e.g. cancers of the brain, lung, ovary, breast, prostate or colon, or carcinomas and sarcomas), autoimmune diseases or allergies (e.g. allergic rhinitis, hay fever or food allergies), Lyme disease, hepatitis, HIV or malaria. The composition is also useful for treating, preventing or ameliorating the symptoms resulting from exposure to a biowarfare agent, e.g. Ebola, Anthrax or Listeria. The present sequence is an immunostimulatory oligonucleotide described in the exemplification of
                                    The present invention relates to an immunostimulatory composition, which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New immunostimulatory compositions comprising RNA/DNA hybrid oligonucleotides, useful for enhancing an immune response or inducing cytokines, particularly for treating diseases, e.g. cancer, allergy or

comprises at least one oligonucleotide comprising both an RNA region and a DNA region. The composition is useful for chhancing both an ENA region and an independent of the composition is useful for chancing an immune response or inducing cytokines. It can be used as a vaccine adjuvant and in treating diseases, including pathogenic infection, (non-)malignant tumours (e.g. cancers of the brain, lung, ovary, breast, prostate or concinomes and sarcomes), autoimmune diseases or allergies (e.g. allergic rhinitis, hay fever or food allergies), Lyme disease, hepatitis, HIV or malaria. The composition is also useful for treating, preventing or amliorating the symptoms resulting from exposure to a biowarfare agent, e.g. Boola, Anthrax or Listeria. The present sequence is an immunostimulatory oligonucleotide described in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to an immunostimulatory composition, which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New immunostimulatory compositions comprising RNA/DNA hybrid oligonuclectides, useful for enhancing an immune response or inducing cytokines, particularly for treating diseases, e.g. cancer, allergy or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /*tag= a

comprises at least one oligonucleotide comprising both an RNA region and a DNA region. The composition is useful for enhancing an immune response or inducing cytokines. It can be used as a vaccine adjuvant and in treating diseases, including pathogenic infection, (non-)malignant tumours (e.g. cancers of the brain, lung, ovary, breast, prostate or colon, or carcinomas and sarcomas), autoimmune diseases or altergies (e.g. allergic rhinitis, hay fever or food allergies), Lyme disease, preventing or ameliorating the symptoms resulting from exposure to a biowaffare agent, e.g. Ebola, Anthrax or Listeria. The present sequence is an immunostimulatory oligonucleotide described in the exemplification of the invention

Inducing the production of vascular endothelial growth factor by a cell, useful for inducing angiogenesis, comprises contacting the cell with a CpG oligodeoxynucleotide.

Example 7; SEQ ID NO 16; 37pp; English.

The present invention describes a method for inducing the production of vaccular endothelial growth factor (VEGF) by a cell comprising contacting the cell with a CPG oligonucleotide and therefore inducing the production of VEGF by the cell. Also described: (1) inducing neovascularisation in a tissue, comprising introducing a CPG oligonucleotide into an area of the tissue where the formation of new blood vessels is desired, and so inducing neovascularisation in the area of the tissue; (2) promoting angiogenesis in an area of the subject where angiogenesis is desired, comprising introducing a CPG oligonucleotide to the area, and so promoting angiogenesis in the subject; and (3) screening for an agent that inhibits neovascularisation, comprising administering a CPG

oligonucleotide to a non-human mammal and administering the agent to the mammal, where inhibition of angiogenesis in the animal indicates that the agent is effective in inhibiting neovascularisation. The CpG oligonucleotides have vulnerary, vascularisation. The CpG activities, and can be used in gene therapy. The method and the CpG oligonucleotides can be used in gene therapy. The method and the CpG neovascularisation, such as in subjects with a skin graft, subjects who atherosclerosis or ischaemia. The method may also be used in screening for agents that inhibit neovascularisation. The present sequence represents a CpG oligonucleotide which is used in the exemplification of the present invention. 88888888888888888888

leading to activation of natural killer (NK) cells. A cell-mediated or humoral response can then occur by activation of T or B-cells. The humoral response can then occur by activation of T or B-cells. The induction of an immune response is useful for treating, preventing or analiorating an allergic reaction (preferably asthma), or an infection, where an immunogenic CgG oligonucleotide is administered either alone or in combination with an anti-allergenic agent or anti-infectious agent. The allergic conditions which may be treated include eczema, allergic rhinitis, hayfever, urticaria, food allergies and other atopic conditions, and the infections which may be treated include viral, bacterial, fungal and protozoal infections such as tuberculosis, ADS, leishmania and schistosomiasis. Immune response induction may also be used in the treatment of an autoimmune disorder (e.g., lupus erythematosus, rheumatoid arthritis and multiple sclerosis), a disease associated with immune system deficiency, and symptoms resulting from exposure to an agent of biological warfare. An immunogenic CpG oligonucleotide, either alone or in combination with an anti-cancer agent, is useful for treating solid tumour cancer. The induction of an immune response is used in antisense therapy and to improve the efficacy of a vaccine. The oligonucleotide is preferably administered to lymphocytes ex vivo, producing activated lymphocytes which are then considered to the host. The present sequence represents an immunogenic consideration of the considered to the host. The present sequence represents an immunogenic administered to the host. The present sequence represents an immunogenic CpG oligodeoxynucleotide of the invention 8X3GGGGGGGGGGGGGGGGGGGGG

The invention relates to novel immunogenic CpG oligodeoxymucleotides (AAC80581-C80723). The oligomucleotide are at least 10 bases long and comprise one of the generic sequences 5'-NNNT-CpG-wNNN-3' or 5-RY-CpG-RY -3'. The central CpG motif is unmethylated, and the oligomucleotides of the departation also relates to an oligomucleotide delivery complex omportising an oligomucleotide of the invention and a targetting complex made and only on oligomucleotide delivery complex. The oligomucleotide of the invention and a targetting complex and a pharmaceutical composition comprising the oligomucleotide delivery complex. The oligomucleotides are able to induce a targetting calivery complex. The oligomucleotides are able to induce a targetting calivery complex and those of the sequence 5'-NNT-CpG-RNJ response, with oligomucleotides are able to induce a targetting and a targetting the oligomucleotide acts on antigen-presenting cells of the administration, the oligomucleotide acts on antigen-presenting cells calivery complex and charal killer (NK) cells. A cell-mediated or humoral response is useful for treating, preventing or ameliorating an allergic reaction (preferably asthma), or an infection, where an immunogenic CpG oligomucleotide is administered either alone or conditions, hayfever, urticaria, food allergies and characteria; preventing or conditions, which may be treated include eczema, allergic conditions which may be treated include eczema, allergic conditions, and the infections which may be treated include eczema, allergic conditions which may be treated include eczema, allergic conditions which may be treated include eczema, allergic conditions, and the infections which may be treated include eczema, allergic conditions which may be treated include eczema, allergic conditions which may be treated include eczema, allergic conditions which may be appeared in the treatment of an autoimmune disorder (e.g., upwar eczema, rhemmatoid arthritis and multiple sclerosis), a disease cryhematowus, rheumatoid arthritis and ö allergies, cancer, and autoimmune disorders and for ameliorating symptoms resulting from exposure to a bio-warfare agent. present sequence represents an immunogenic Gaps lymphocytes ex vivo, producing activated lymphocytes which are then administered to the host. The present sequence represents an immunocygo oligodeoxynucleotide of the invention Novel oligonucleotides useful for the prevention and treatment of .. 0 DB 4; Length 20; 0; Indels Sequence 20 BP; 3 A; 3 C; 11 G; 3 T; 0 U; 0 Other; 21; 0; Mismatches 100.0%; Score 18; 100.0%; Pred. The invention retardes to novel immunogenic cpc oil pages 10 bases long and comprise one of the generic sequences 5'-NNNT-CpG-WNNN-3' or 5'-RY-CpG-RY comprise one of the generic sequences 5'-NNNT-CpG-WNNN-3' or 5'-RY-CpG-RY of comprise one of the generic sequences 5'-NNNT-CpG-WNNN-3' or 5'-RY-CpG-RY optionally have phosphorothioate linkages which make them more resistant to degradation. The invention also relates to an oilgonucleotide delivery complex. The oilgonucleotide of the invention and a targetting agent, and a pharmaceutical composition comprising the oilgonucleotide of the sequence 5'-RY-CpG-RY-3' being able to induce a cell-mediated (T-cell) response or a humoral (B-cell, antibody) response, with colloquoucleotides of the sequence 5'-RY-CpG-RY-3' being able to induce a cell-mediated response, and those of the sequence 5'-RNNT-CpG-WNNN-3' being able to induce a humoral response. It is thought that after cell-mediated response and those of the sequence 5'-RY-CpG-RY-NNN-CpG-WNNN-3' being able to induce a humoral response. It is thought that after administration, the oilgonucleotide acts on antigen-presenting cells. The leading to activation of natural killer (NK) cells. A cell-mediated or humoral response can then occur by activation of T- or B-cells. The induction of an immune response is useful for treating, preventing or meliorating an allergic reaction (preferably asthma), or an infection, where an immunosophic CpG oilgonucleotide is administered either alone or conditions, and the infections which may be treated include eczema, allergic conditions, and the infections which may be treated include eczema, allergic conditions, and the infections which may be treated include eczema, allergic conditions, and the infections which may be treated include eczema, allergic conditions, and the infections which may be treated include eczema, allergic conditions, and the infections which may be treated include eczema, allergic conditions, and the infections will manned and schiscosmiasis. Immune response is tube Novel oligonucleotides useful for the prevention and treatment of allergies, cancer, and autoimmune disorders and for ameliorating symptoms resulting from exposure to a bio-warfare agent. oligonucleotide, either alone or in combination with an anti-cancer agent, is useful for treating solid tumour cancer. The induction of an immune response is used in antisense therapy and to improve the efficacy of a vaccine. The oligonucleotide is preferably administered to lymphocytes ex vivo, producing activated lymphocytes which are then administered to the host. The present sequence represents an immunogenic CpG oligodeoxynucleotide of the invention invention relates to novel immunogenic CpG oligodeoxynucleotides Claim 4; Page 30; 46pp; English.

Oligodeoxynucleotides for inducing an immune response to treat and prevent an allergic reaction, cancer, an autoimmune disorder and symptoms resulting from exposure to bio-warfare agents, comprise multiple CpG sequences.

Claim 5; Page 39; 48pp; English.

AASO9551-AASO9662 represent oligodeoxynucleotides (ODN) of at least 10 nucleotides comprising multiple CpG sequences, where one of the CpG sequences. The different from another of the multiple CpG sequences. The Sequences is different from another of the multiple CpG sequences. The CDN are useful for inducing an immune response, preferably a cell-mediated immune response, involving non-B cell activation, interferon gamma introduction or a humoral immune response involving B cell activation, antibody and interleukin-6 production in a host, for treating, preventing or ameliorating an allergic reaction, e.g. asthma. CC cancer, e.g. solid tumour cancer, a disease associated with the immune system e.g. autoimmune disorder or an immune system deficiency, infection or a symptom resulting from exposure to bio-warfare agent in a human. The induction of immune response improves the efficacy of a vaccine and is induction of immune response improves the efficacy of a vaccine and is coryza, hay fever, bronchial asthma, urticaria (hives), food allergies and enlaria, for treating immune system deficiency virus (HIV) and malaria, for treating immune diseases such as rheumatoid arthritis and multiple sclerosis, infections including Francisella, schistosomiasis, the and multiple sclerosis, infections including Francisella, schistosomiasis, harbare agent, including Francisella, including Ebola, harbare agent, including Francisella schibareans and autoimmune and account and autoimmune and autoimmune and autoimmune and account and autoimmune and autoimmune and autoimmune and autoimmu Anthrax and Listeria

AASO9551-AASO9662 represent oligodeoxymuclectides (ODN) of at least 10 muleotides comprising multiple CpG sequences, where one of the CpG muleotides comprising multiple CpG sequences. The sequences is different from another of the multiple CpG sequences. The CpG sequences is different from an immune response, preferably a cell-comparation of the cpG sequences. The cpG sequences involving a cell activation, interferon activation, antibody and interleukin-6 production in a host, for treating, preventing or ameliorating an allergic reaction, e.g. asthma. The cancer, e.g. solid tumour cancer, a disease associated with the immune system e.g. autoimmune disorder or an immune system deficiency, infection or a symptom resulting from exposure to bio-warfare agent in a human. The induction of immune response improves the efficacy of a vaccine and is induction of immune response improves the efficacy of a vaccine and is used in antisense therapy. The ODN are useful for treating, preventing or ameliorating allergic reactions, including eczema, allergic rhinitis or coryza, hay fever, bronchial asthma, urticaria (hives), food allergies and other atopic conditions, for improving the efficacy of vaccines

AASO9551-AASO9662 represent oligodeoxymucleotides (ODN) of at least 10 mucleotides comprising multiple CpG sequences, where one of the CpG mucleotides comprising multiple CpG sequences. The collater of the multiple CpG sequences. The sequences is different from another of the multiple CpG sequences. The CpG sequences is different from another of the multiple CpG sequences. The condition of the multiple cpG sequences. The coll for induction or a humon-B cell activation, interferon gamma (IFN-gamma) production or a humon-B cell activation, interferon gamma (IFN-gamma) production or a humon-B cell activation, as the boat, for treating, preventing or ameliorating an allergic reaction, e.g. asthma, cancer, e.g. solid tumour cancer, a disease associated with the immune system edicored with the immune system edicored with the immune system exposure to blo-warfare agent in a human. The system exposure the efficacy of a vaccine and is used in antisense therapy. The ODN are useful for treating preventing or ameliorating allergic reactions, including eczema, allergic rhinitis or ameliorating allergic reactions, including eczema, allergic rhinitis or coryza, hay fever, bronchial asthma immunodeficiency virus (HIV) and and alaria, for treating immune system deficiencies, e.g. lupus and autoimmune diseases such as rheumatoid arthritis and enthematosus and autoimmune diseases such as rheumatoid arthritis and multiple sclerosis, infections including Francisella, schistosomiasis, tuberculosis, acquired immunodeficiency syndrome (AIDS), Leishmania and

Claim 5; Page 34; 48pp; English.

seguences

AASO9551-AASO9662 represent oligodeoxynucleotides (ODN) of at least 10 nucleotides comprising multiple CpG sequences, where one of the CpG sequences is different from another of the multiple CpG sequences. The ODN are useful for inducing an immune response, preferably a cell-mediated immune response, involving non-B cell activation, interferon gamma (IFN-gamma) production or a humoral immune response involving B cell activation, antibody and interleukin-6 production in a host, for treating, preventing or ameliorating an allergic reaction, e.g. asthma, cancer, e.g. solid tumour cancer, a disease associated with the immune system e.g. autoimmune disorder or an immune system deficiency, infection or a symptom resulting from exposure to bio-warfare agent in a human. The

                used in antisense therapy. The ODN are useful for treating, preventing ameliorating allergic reactions, including eczema, allergic rhinitis or coryza, hay fever, bronchial asthma, urticaria (hives), food allergies and other atopic conditions, for improving the efficacy of vaccines against hepatitis A, B and C, human immunodeficiency virus (HIV) and malaria, for treating immune system deficiencies, e.g. lupus erythematosus and autoimmune diseases such as rheumatoid arthritis and multiple aclerosis, infections including Francisella, schistosomiasis, tuberculosis, acquired immunodeficiency syndrome (AIDS), Leishmania and symptoms resulting from exposure of bio-warfare agent, including Ebola,
induction of immune response improves the efficacy of a vaccine and is

Oligodeoxynucleotides for inducing an immune response to treat and prevent an allergic reaction, cancer, an autoimmune disorder and symptoms resulting from exposure to bio-warfare agents, comprise multiple CpG sednences

Verthelyi D;

D, Ishii K,

Klinman

WPI; 2001-442129/47.

Claim 5; Page 32; 48pp; English.

AASO9551-AASO9662 represent oligodeoxynucleotides (ODN) of at least 10 nucleotides comprising multiple CpG sequences, where one of the CpG sequences is different from another of the multiple CpG sequences. The ODN are useful for inducing an immune response, preferably a cellmediated immune response, involving non-B cell activation, interferon gamma (IFN-gamma) production or a humoral immune response involving B

```
cell activation, antibody and interleukin-6 production in a host, for treating, preventing or ameliorating an allergic reaction, e.g. asthma, cacher, e.g. solid tumnour cancer, a disease associated with the immune system e.g. solid tumnour cancer, a disease associated with the immune cross autoimmune disorder or an immune system deficiency, infection or a symptom resulting from exposure to bio-warfare agent in a human. The cross induction of immune response improves the efficacy of a vaccine and is used in antisense therapy. The ODN are useful for treating, preventing or ameliorating allergic reactions, including eczema, allergic rhinitis or coryza, hay fever, bronchial asthma, urticaria (hives), food allergies and other atopic conditions, including the filties of vaccines cross maint hepatitis A, B and C, human immunodeficiency virus (HIV) and malaria, for treating immune system deficiencies, e.g. lupus crythematcous and autoimmune diseases such as rheumatoid arthritis and multiple sclerosis, infections including Franciscila, schistosomiasis, tuberculosis, acquired immunodeficiency syndrome (AIDS), Leishmania and symptoms resulting from exposure of bio-warfare agent, including Ebola, XX

After the addition of EcoRI adaptors, the ds-cDNAs were disested with NotI and size-selected. The resulting molecules were directionally cloned into the EcoRI and NotI sites of the pTT7RAK vector. The library then went through one round of normalization to CoT value of 5 based on the methods of Marcelo Bento Soares (Genome
high-quality region of each sequence. Low-quality bases between the poly-T and the high-quality region were replaced with N's to serve
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Chlamydomonas reinhardtii

Overall sequence quality assessment and vector trimming were conducted using the Lucy software (ehttp://www.tagr.org/softlab/>). Lucy parameters were set to ensure an overall trimmed quality of 97.5% or better without any vector fragments in the chosen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Eukaryota, Viridiplantae, Streptophyta, Embryophyta, Tracheophyta,
